## Continuous Coil Anodizing

The advantages of coil anodizing stem from efficient processing and low associated labor costs.

The configuration for a basic continuous coil anodizing line consists of a coil feed operation, pretreatment and cleaning tanks, post treatment facility, and coil rewind equipment.

Using pre-anodized coiled aluminum lowers finishing costs, saves production time, and reduces material handling.

### Production procedures using pre-anodizing:

1. Order pre-anodized aluminum
2. Fabricate the part
3. Assemble product
4. Package for market

### Production procedures using post finishing:

1. Fabricate the part
2. Pack and send to anodizer
3. Unpack and rack
4. Anodize pieces
5. Unrack and repack
6. Receive and unpack
7. Final assemble
8. Package for market
