

A New Look at ACA for Today's Ceiling Projects

Looking for custom, adaptable finishes that can transform the ordinary into extraordinary? ACA has color anodized, brushed, painted and satin finishes that can be matched to your specification. We can also emboss or perforate these finishes for a custom design that is unique and decorative. Contact ACA today for more information, a brochure of our current finishes and colors or to speak with a sales representative about your project.

Low Gloss White

Our low gloss 90% is soft, beautiful and adaptable in today's engineered designs. This finish is compatible with LED lighting. Specify **ACA's 498MR** in your next project.

Anodizing Perforated Coil

Wanting more than anodized? **Perforation** is also available through ACA! Perforated coils can be anodized for a uniform, corrosion resistant finish. Submit your design to our sales department for a custom quote today.

The Many Shades of Bronze

Our **bronze finishes** in satin and brushed come in many gauges and shades for you to choose from. Sample key rings are available for you today, so contact your ACA representative to get yours.

Metallic Series

PRODUCT OVERVIEW:

ACA's anodic finishes are available in bronze, gold, and clear. These decorative finishes are used in a variety of different interior and exterior applications.

Anodic finishes are highly abrasion resistant and do not peel, chip, flake, or chalk. When anodized after perforating they maintain critical corrosion resistance and uniform color and appearance across the perforated substrate.

The translucent deep, rich metallic appearance and lasting durable finish characteristics make UltraMet a preferred choice over traditional paint coatings.
